

About the programme

Robots perform a variety of tasks which are difficult for the human beings to do. They work in hazardous places where human beings cannot work. They also help human beings to work faster in industries and even in space. In view of this, Shri Vishnu Engineering College for Women (SVECW) in collaboration with University of Massachusetts (UMASS), Lowell is conducting a **'Short term Training Program on Lego Robots'** for high school students. This training program will help the students to learn about the working of various kinds of Lego robots. It will also teach them to program various robots which can be used in day-to-day applications. Engineering students of SVECW and Ms. Erin Webster and Mr. David Harrington of UMASS will train the students.
